Surge protection and interference suppression filters

Damage caused by surge voltages

The number of electrical devices damaged or destroyed by surge voltages is increasing year on year. This can prove expensive in terms of repairs and downtimes. In an industrial environment, the hazards are not just restricted to systems and devices. Building technology applications and even residential buildings may be affected.

Interference voltages

Switching operations triggered mechanically or electronically generate pulse-like and high-frequency interference voltages. These voltages spread in an unimpeded manner across the cable network. All the devices within this cable network are affected. Data errors, uncontrolled functions, and system crashes can result, with electronic and data processing devices at particular risk.

Surge voltage – What is it?

Lightning discharge

It is above all lightning strikes (lightning electromagnetic pulse, LEMP) that have the greatest potential for damage among all the causes of occurrence.

They cause transient overvoltages that can extend across great distances and are often associated with high-amplitude surge currents.

Even the indirect effects of a lightning strike can lead to a surge voltage of several kilovolts and result in a surge current of tens of thousands of amperes. In spite of the very brief duration, such an event can lead to total failure or even the destruction of the entire system.

Switching operations

Switching operations (switching electromagnetic pulse, SEMP) can generate induced surge voltages that spread to supply lines. In the case of large switch-on currents or short circuits, very high currents can flow within a few milliseconds. These short-term current changes can lead to transient overvoltages.

Electrostatic discharge

Electrostatic discharge (ESD) occurs if exposed conductive parts with different electrostatic potential approach each other and result in a charge exchange. A sudden charge exchange leads to a brief surge voltage. This presents a hazard, especially for sensitive electronic components.

Surge voltage – What are the effects?

Regardless of what causes a surge voltage, the consequences are the same:

- Device destruction
- System downtimes
- Total failure of controllers

Device failure or defects caused by surge voltages are more frequent than expected. For non-private systems the consequences of a failure are generally much more serious, such as downtimes or data loss. The failure of a device or a machine that is used in a professional environment often leads to costs that are many times higher than repairing the defective device.

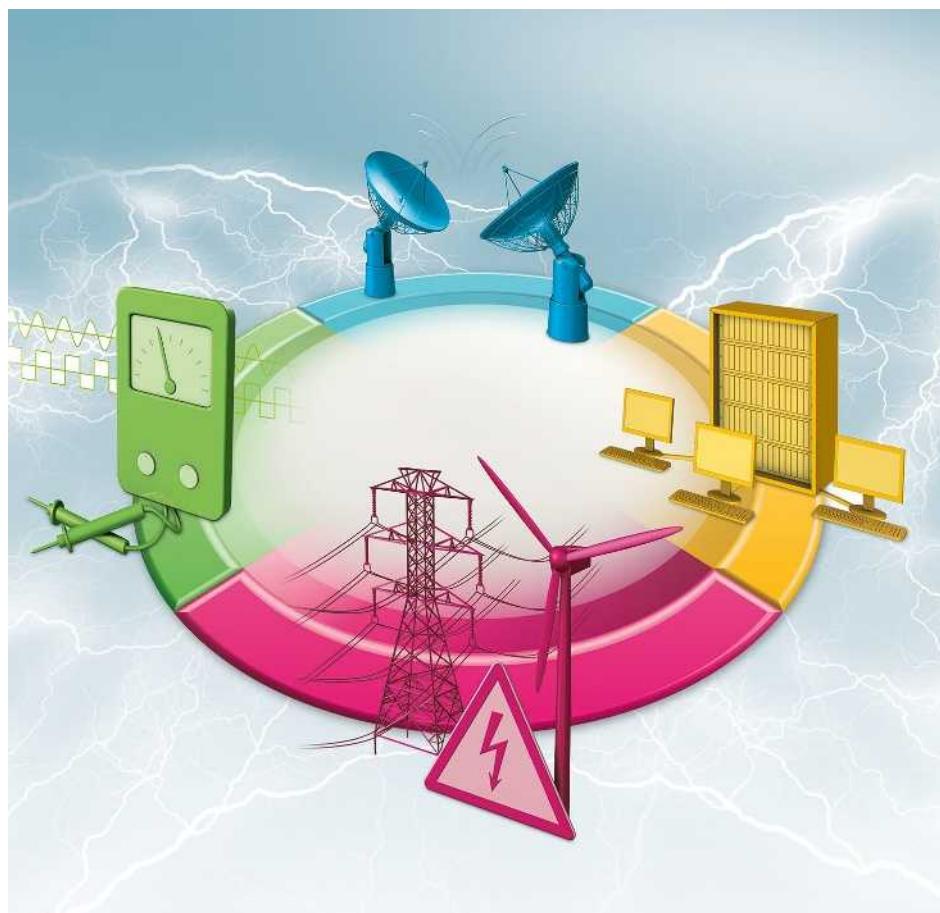

Surge voltage – How can you provide correct protection?

Effective surge protection starts with assessing the potential risk and identifying all the devices within the item to be protected.

The resulting protection concept takes into account all the interfaces of the power supply unit as well as those for data and telecommunications. This is the only way to comprehensively and effectively protect all the end devices, for example, within a data network, production plant or building installation. Combining high-quality protective devices with innovative arrester technology, surge protective devices ensure a high degree of system availability and safety in all areas of electrical engineering.

 Your web code: #1133

The protective circle principle

A clear illustration of the lightning protection zone concept is the protective circle.

An imaginary circle is drawn around the object to be protected. A surge protective device should be installed at all points where cables intersect this circle.

The area within the protective circuit is therefore protected in such a way that conducted surge voltage couplings are prevented.

The protective circle must include all electrical and electronic transmission lines in the following areas:

- Power supply
- Measurement and control technology
- Information technology
- Transceiver systems

Surge protection for power supplies

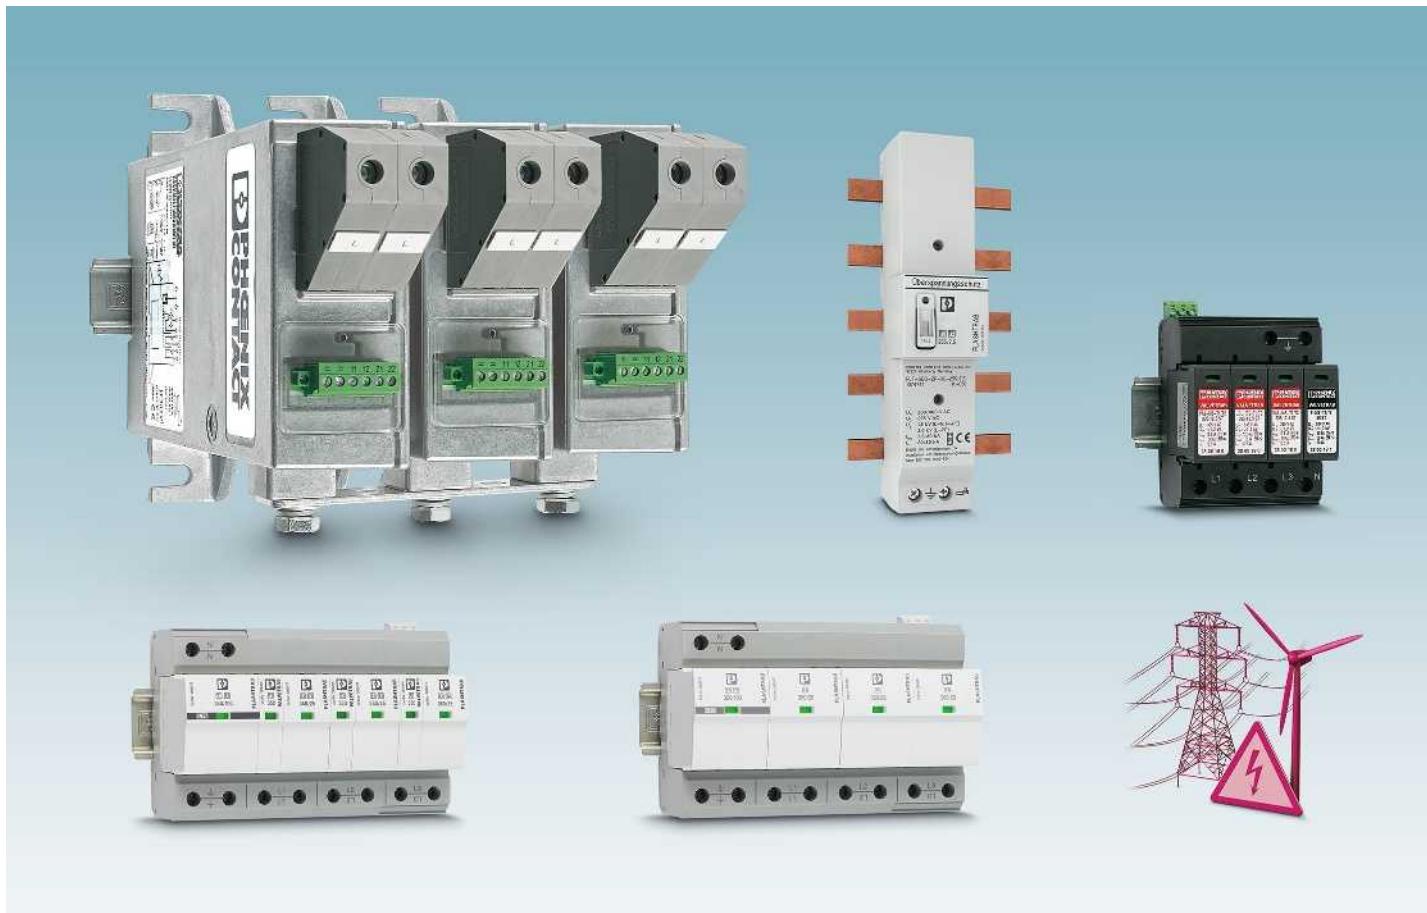

Surge protection for MCR technology

Surge protection for information technology

Surge protection for transceiver systems

Surge protection for power supplies

Type 1+2 combined lightning current and surge arrester

Type 1+2 surge protective devices must satisfy the most stringent requirements in terms of amplitude and specific energy from surge currents, as they are supposed to protect against the effects of direct lightning strikes. In the typical installation environment of the main distribution, the demand placed on the short-circuit current rating is also often very high. In order to be able to meet these requirements, powerful technology is required, such as spark gap technology.

Type 2 surge protective device

Type 2 surge protective devices are generally installed in sub-distributions or machine control cabinets. These SPDs must be able to discharge induced surge voltages from indirect lightning strikes or switching operations but not handle direct lightning strikes. As such, the energy input is significantly reduced. In any case, induced surge voltages caused by switching operations are often very dynamic. Here, a technology with fast response behavior stands up to the test, e.g., varistor technology.

Type 3 device protection

Type 3 surge protective devices are generally installed immediately upstream of the end device to be protected. Due to differing installation environments, type 3 SPDs are available in a very wide range of designs.

- Devices for DIN rail mounting
- Devices for installation in sockets, cable ducts, and underfloor systems
- Attachment plug for sockets

Combined lightning current and surge arrester or combined lightning current and surge arrester special?

Lightning currents are simulated with surge currents in the 10/350 µs pulse shape. Switching surge voltages and remote lightning strikes are simulated with surge currents in the 8/20 µs pulse shape.

As per the requirements of product standard IEC 61643-11, a type 2 SPD must only be able to discharge 8/20 pulses. A type 1 SPD is designed for 8/20 µs pulses as well as 10/350 µs pulses. In this sense, every type 1 SPD is also a type 2 SPD. The fact that a type 1 SPD satisfies test classification II is a redundant piece of information and does not constitute an additional qualification. These types of SPDs are often referred to as combined lightning current and surge arresters (type 1+2 SPDs).

This is an arrester that satisfies both test classifications.

In the case of a combined lightning current and surge arrester special, such as the FLT-SEC-T1+T2, however, a voltage-switching spark gap (type 1+2 SPD) is coordinated directly with a voltage-limiting varistor (type 2 SPD) that is connected in parallel. Two autonomous protective devices ensure optimum response behavior, the best possible system protection, and a long service life for the components.

Surge protection for MCR technology

The range of different applications presents a particular challenge to surge protection for measurement and control technology. Different signal types, interfaces, and fieldbus systems require a tailor-made product and a wide product range. Various protective circuits are therefore available that are specially optimized for the application.

Primarily, a distinction is made between two signal types: independent closed loops and signals with a common reference conductor or a shared return conductor.

The independent closed loops are often designed so that they are isolated from the ground potential for immunity to interference.

Surge protection for information technology

In the area of information technology, the various interfaces operate with low signal levels at high frequencies. This makes them particularly sensitive to surge voltages and can lead to the destruction of electronic components in IT systems. The surge protective devices must therefore also have high-quality signal transmission behavior, as otherwise, malfunctions can be expected in the data transmission.

Possible interfaces include the following:

- Ethernet
- Serial interfaces
- Telecommunications interfaces

Surge protection for transceiver systems

Typical areas of application in the field of transceiver systems are the antenna connections of television and radio receivers, video communication, and mobile phone systems. Antenna cables which extend beyond a building and are usually very long, plus the antennas themselves, are directly exposed to atmospherical discharge. Surge voltages can even reach the sensitive interfaces of transceiver systems via this cable path.

Surge protection for the power supply

Clear insight into the system

ImpulseCheck is the world's first intelligent assistance system for surge protection in the field of mains protection. The module allows you to measure the state of health of every single protective device via cloud connection and provides new digital services.

Optimum protection for sensitive systems

In many cases, SPDs can limit surge voltages and discharge surge currents without your system sustaining any damage. Depending on the number, duration, and amplitude of the surge currents, SPDs may be pushed to their very limits and fail. Other faults in the electrical installation, such as short circuits or ground faults, can also contribute to the failure of SPDs. A failure is indicated by a status indicator on the SPD itself and additional remote signaling, if necessary.

The current, actual load on the SPDs can only be determined by performing an electrical test on the individual modules. However, this is laborious and only provides an insight into the state of the SPDs at the time of testing.

How does ImpulseCheck work?

ImpulseCheck enables the continuous monitoring of SPDs. Thanks to external sensor cables, the system can be easily installed or retrofitted in both new and existing systems. It takes just a few simple steps to attach up to 4 sensors to the connecting cables of the monitored SPD.

Surge currents with a very high time resolution are captured on each channel. Both high-frequency events and sustained currents are measured reliably. Electromagnetic interference is detected, allocated a time stamp, and transmitted to PROFICLOUD. Important parameters are evaluated and indicated from the signal curves for surge current events. In addition, the remote indication contact of the monitored SPD can be evaluated.

For Phoenix Contact SPDs, the actual load is determined at all times based on the recorded events. The determined status (green, yellow, red) is displayed in PROFICLOUD as well as on the device itself. This allows you to respond proactively before an SPD actually fails.

Benefit from digital added value

The cloud-based evaluation of measured data enables the direct use of new digital services. Status messages regarding surge protection can be displayed on any web-enabled device. For example, you can configure custom notifications for various events in PROFICLOUD or create standard-compliant status reports at the push of a button.

Thanks to the ongoing further development of new and existing devices for PROFICLOUD as well as the platform itself, it will be possible to network a wide range of applications and services in the future.

Surge protection for the power supply

Keeping the pulse of your system

Benefit from predictive maintenance: thanks to real-time measurement of electromagnetic interference and surge currents, you can continuously monitor the condition of the system and the surge protection. This makes the remaining service life expectancy (state of health) of the protective devices transparent, so that maintenance services become more predictable.

Status reports at the push of a button

Depending on the system type, the IEC 62305-3 standard requires that surge protective devices are tested at specific intervals. Thanks to the real-time monitoring, you know the SPD's state and can generate status reports at any time at the push of a button – even between the predetermined test intervals. This provides you with all the necessary information, whenever you need it.

Benefit from digital added value and services

The cloud-based analysis of measured values enables completely new automated processes. Combine the values from surge voltage events in the cloud with local weather data or location information, for example. Use this information for your logistics or export the data for your own evaluation.

Surge protection and interference suppression filters

Surge protection for the power supply

Safe Energy Control (SEC) range

The surge protective devices in the SEC product range represent an easy-to-install product range which combines maximum performance and superior durability. Electronic consumers are reliably protected and maintenance costs are reduced. The surge protective devices are characterized by their easy, cost-effective, and space-saving installation.

Protection for life

The high-quality products in the SEC range are particularly durable thanks to their high, laboratory-tested quality. This is demonstrated by international certificates. Even in the most lightning-prone location in the world, the surge protective devices in the SEC product range will provide protection for decades to come.

Efficiency in control cabinet manufacturing

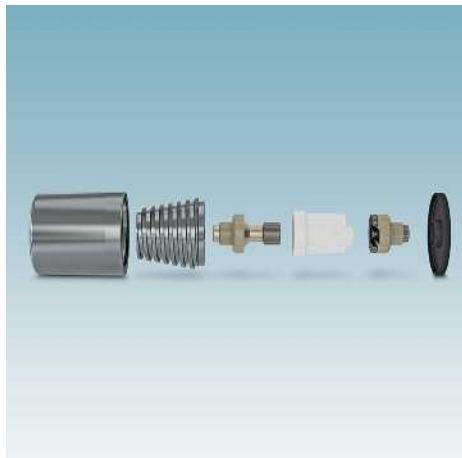

Plan your control cabinets more efficiently and easily with the SEC range. Installation is cost-effective and space-saving, thanks to the uniform compact design of the surge protective devices, which do not need a backup fuse. The world's smallest type 2 protective device and the world's first type 3 surge protection with Push-in connection technology are emblematic of this.

 Your web code: #0143

Uninterrupted protection for your system

Ensure uninterrupted system operation by using surge protective devices from the SEC range. By using technologically leading spark gaps and products with safe disconnect device, you can implement a consistent and safe protection concept. The type 1, 2, and 3 surge protective devices are all pluggable. Testing and maintenance work is therefore made much easier.

Surge protection for the power supply

**New spark gaps**

The newly developed spark gaps in the type 1 arresters are isolated and extremely powerful thanks to the use of technology with no line follow current. This increases the durability of the components in your system.

**Type 1+2 combined lightning current and surge arrester with integrated arrester backup fuse**

The FLT-SEC-HYBRID... combines surge protection and a backup fuse in a single connector. It is no longer necessary to install a separate arrester backup fuse. This saves space and reduces installation costs.

**The power package**

Maximum discharge capacity in an extremely compact design. And all for continuous voltages up to 440 V. The ideal type 1+2 combined lightning current and surge arrester for use in industry and wind turbine generators.

**Lightning and surge protection**

Reliable protection and minimal installation effort, thanks to the narrowest coordinated combination or true type 1 spark gaps and type 2 varistor arresters.

**Ultra narrow**

With an overall width of just 12.5 mm per channel, the type 2 surge protective devices provide outstanding protection in a minimum amount of space – they can be used up to 315 A in the branch without a backup fuse.

**Powerful type 3 device protection**

The world's first type 3 surge protective device with Push-in fast connection technology provides optimum protection for industrial power supply.

Surge protection and interference suppression filters

Surge protection for the power supply

Type 1+2 combined lightning current and surge arrester for harsh industrial environments

With a rated voltage of 800 V AC, a discharge capacity of 35 kA per channel, and a robust housing design, POWERTRAB is ideal for harsh industrial environments and use in 690 V IT networks, such as in wind turbine generators.

Type 1+2 combined lightning current and surge arrester for lightning protection level III and IV

The VAL-MS T1/T2 ... varistor-based combination protective devices meet the requirements of lightning protection class III and IV and also provide the voltage protection level of a type 2 surge protective device.

Type 2 surge protection for higher nominal voltages

With VAL-MS..., corresponding arresters are available for power supplies with higher supply voltages, such as in wind turbine generators or when discharge currents > 30 kA per channel are required.

Type 3 device protection in an extremely compact design

Ideal for protecting end devices, type 3 device protection is used in deep installation boxes, cable ducts or underfloor systems.

Type 3 device protection as an attachment plug

The MAINTRAB device protection range is very easy to retrofit in existing installations. Versions are available as simple adapters for mains sockets or with additional signal interfaces.

Surge protection for LED lights

The surge protective devices for LED applications are specifically designed for street, tunnel or object lighting. Different versions are available for protection class I and II.

Surge protection with integrated arrester backup fuse

VAL-CP-MCB... are combinations of type 2 surge protection with integrated, surge-proof circuit breakers as arrester backup fuses.

Surge protection for 60 mm system technology

VAL-CP-MOSO... are type 2 surge protective devices with integrated, surge-proof arrester backup fuse for installation on 60 mm system technology.

Surge protection for photovoltaic systems

The product range comprises individual components for all types of photovoltaic systems, from 600 V DC up to 1500 V DC.

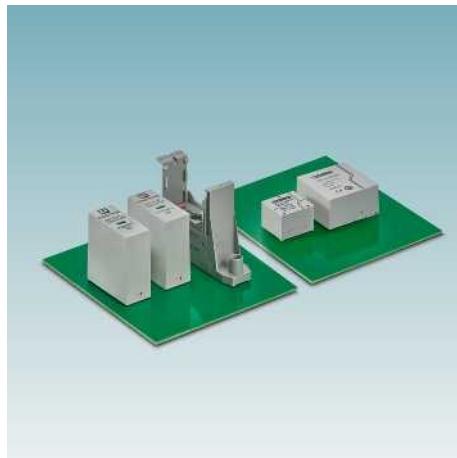

Type 3 surge protection for I/Os and controllers

TTC type 3 is based on the narrow 6 mm TERMITRAB complete range. It protects the 24 V power supply of end devices such as I/Os or controllers against surge voltages from the field.

Surge protection for DC current sources

VALVETRAB-SEC DC is the surge protection solution for power supplies with linear operating characteristics. Two different circuit versions for various nominal voltages provide protection for all common DC applications.

Surge protection for printed-circuit boards

The PRINTRAB series enables powerful type 2 surge protection in a confined space. Installed directly on the PCB, it provides protection for single-phase applications in very small devices. There are numerous areas of application, such as the future 5G communication system or inverters.

Surge protection and interference suppression filters

Surge protection for the power supply

Type 1 protection for the power supply with integrated arrester backup fuse

FLT-SEC-HYBRID

Branch wiring in the TN-C network

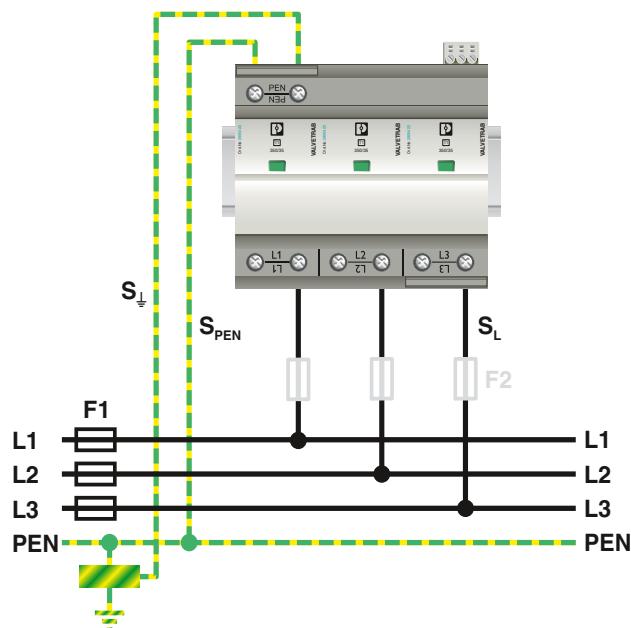

Technical characteristics	
Typical installation location	Upstream or downstream of the circuit breaker of low-voltage distribution boards with large load currents
Lightning protection level	I, II, III, IV
Lightning protection zone transition	LPZ 0 _A → LPZ 1
Coordination	Coordination with type 2 protective devices from the SEC range is guaranteed
Connecting cables	<ul style="list-style-type: none"> – Refer to the adjacent tables for the required conductor cross sections. – The connection to the main grounding rail (S_L) is mandatory (see figure). – For S_L, use a cross section of at least 16 mm². If this connection (S_L) is to be equal to the connection to the protective conductor (S_{PEN}) in the application, use a cross section of at least 35 mm² for S_{PEN}. – If the supply line cross section is greater than 35 mm², make sure that the surge protection connecting cables (S_L) are protected against ground faults and short circuits. Recommendation: use temperature-stable cables for S_L, e.g., XLPE/EPR-insulated cables. – Lay the connecting cables as short as possible, without loops, and with the largest possible bending radii.
Backup fuses	<ul style="list-style-type: none"> – Can be used without backup fuse in branch wiring – The integrated overcurrent protection is selective in relation to upstream F1 fuses $\geq 400 \text{ A gG}$

Surge protection for the power supply

Type 1+2 combined lightning current and surge arrester

FLASHTRAB SEC HYBRID

- Integrated combination of spark gap without line follow current and surge-proof fuse
- Can be used without separate backup fuse, thanks to integrated overcurrent protection
- Free of leakage current, suitable for use in the pre-meter area
- 440 V versions satisfy TOV requirements for use in IT systems
- Can be inserted with innovative push-pull locking mechanism
- Low voltage protection level of 1.5 kV for 264 V and 2.5 kV for 440 V versions
- Optical, mechanical status indicator
- With floating remote indication contact
- Plugs can be tested with CHECKMASTER 2

Surge protection and interference suppression filters

Surge protection for the power supply

Type 1+2 combined lightning current and surge arrester

FLASHTRAB SEC PLUS 440

- Spark gap has no line follow current
- Free of leakage current, suitable for use in the pre-meter area
- Satisfies TOV requirements for use in IT systems
- Pluggable
- Low voltage protection level of 2.5 kV
- Optical, mechanical status indicator
- With floating remote indication contact
- Plugs can be tested with CHECKMASTER 2

2-conductor system, L, PE(N)

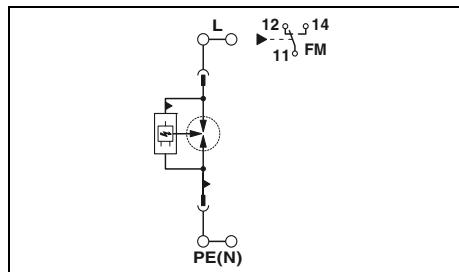

N-PE spark gap

Notes:

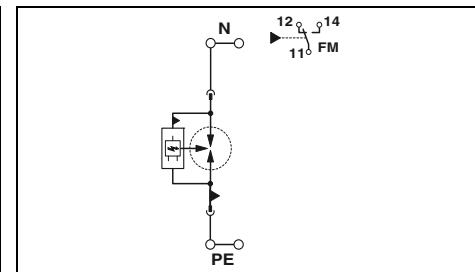

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

Surge protection and interference suppression filters

Surge protection for the power supply

Type 1+2 combined lightning current and surge arrester special FLASHTRAB SEC T1+T2

- Directly coordinated combination of type 1 spark gap without line follow current and type 2 varistor arrester
- Particularly suitable for maximum protection of sensitive devices in harsh environments
- Pluggable
- High continuous voltage of 350 V AC for 230/400 V AC networks with high voltage fluctuations
- Low voltage protection level of 1.5 kV
- Optical, mechanical status indicator
- With floating remote indication contact
- Plugs can be tested with CHECKMASTER 2

Notes:

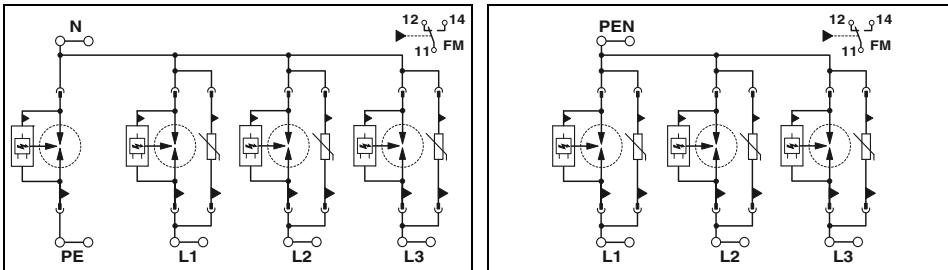

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

Surge protection and interference suppression filters

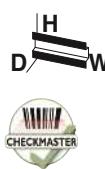

Surge protection for the power supply

Type 1+2 combined lightning current and surge arrester special FLASHTRAB SEC T1+T2

- Directly coordinated combination of type 1 spark gap without line follow current and type 2 varistor arrester
- Particularly suitable for maximum protection of sensitive devices in harsh environments
- Pluggable
- High continuous voltage of 350 V AC for 230/400 V AC networks with high voltage fluctuations
- Low voltage protection level of 1.5 kV
- Optical, mechanical status indicator
- With floating remote indication contact
- Plugs can be tested with CHECKMASTER 2

Notes:

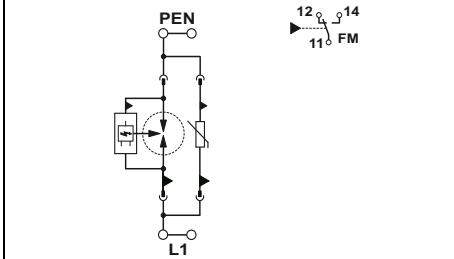

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

T1+T2 combined lightning current

and surge arrester

FLASHTRAB SEC ZP

- Complete module for direct mounting on 40 mm busbar systems
- Fits in every distribution board, thanks to extremely narrow overall width of just 47 mm
- Spark gap has no line follow current
- Free of leakage current, suitable for use in the pre-meter area
- Low voltage protection level of 1.5 kV L-N/N-PE and 2 kV L-PE
- Test button for electrical status indicator
- Tool-free and secure attachment to 5 and 10 mm thick rails, thanks to universal interlock
- Satisfies all requirements for the installation of surge protection in accordance with DIN VDE 0100-534

Type 1+2 combined lightning current and surge arrester**VALVETRAB MS**

- Universal pluggability
- Suitable for 19" applications with rackmount systems
- Thermal disconnect device for each individual plug
- Optical, mechanical status indication for the individual arresters
- With or without floating remote indication contact
- Mechanical coding of all slots
- Plugs can be tested with CHECKMASTER 2

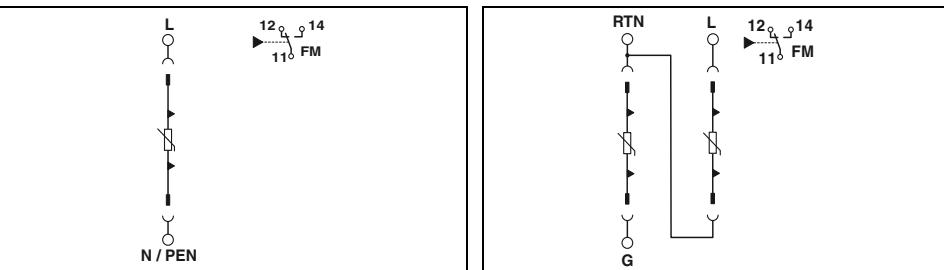

2-conductor system; L, PEN

3-conductor system; L, N, PE

Notes:

Surge protection and interference suppression filters

Surge protection for the power supply

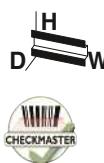

Type 1+2 combined lightning current and surge arrester

VALVETRAB MS

- Double terminal block for safe and easy equipotential bonding connection
- Screw shafts with raised domes to ensure safe working
- Main connections with extended insertion funnels for increased resistance to creepage
- Optical, mechanical status indication for the individual arresters
- Visual display for checking the status directly on the device
- Pluggable signal connection for remote status signaling
- Compact design for space-saving installation

Notes:

The product is also suitable for applications in PV systems with a max. short-circuit current $I_{SCPV} = 15$ kA (in accordance with EN 50539-11:2013).

Surge protection and interference suppression filters

Surge protection for the power supply

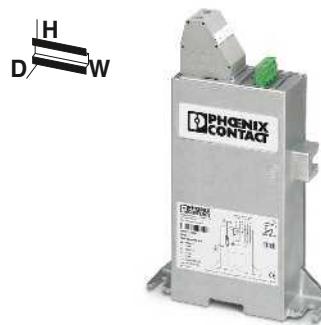

Type 1+2 combined lightning current and surge arrester

POWERTRAB PWT

- Series connection from the high-capacity varistor and gas-filled surge arrester
- Free of leakage current, suitable for use in the pre-meter area
- High TOV resistance for use in IT systems and in the event of repetitive current peaks, e.g., triggered by frequency inverters
- Satisfies the installation requirements for use in wind turbine generators in accordance with CLC/TS 50539-22
- Encapsulated die-cast housing for direct assembly on mounting plates
- Suitable for use in harsh industrial environments
- High lightning impulse current of 35 kA per position
- Multi-stage status monitoring via remote indication contact
- Visual status indicator on the device

Notes:

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

Surge protection for the power supply

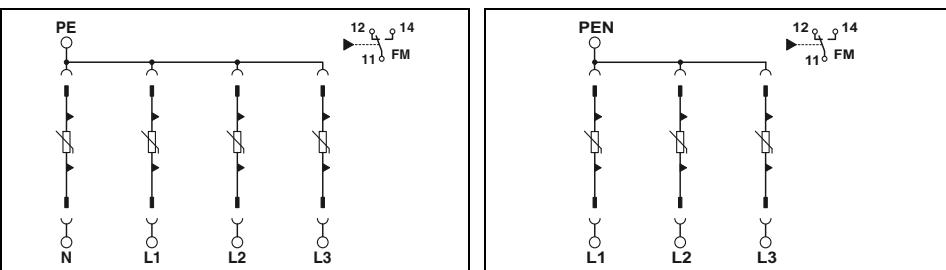

**Type 2 surge protective device
VALVETRAB SEC**

- Varistor arrester with a low leakage current
- High-performance gas-filled surge arrester for N/PE protection
- Version with high nominal discharge current of 40 kA in the N-PE path
- For systems with more stringent safety requirements
- Extremely narrow design, just 12 mm per position, including for 400/690 V AC systems
- Pluggable
- Low voltage protection level of 1.5 kV for 230/400 V AC systems or 1.9 kV for 400/690 V AC systems
- Optical, mechanical status indicator
- With floating remote indication contact as an option
- Plugs can be tested with CHECKMASTER 2

Surge protection and interference suppression filters

Surge protection for the power supply

Type 2 surge protective device

VALVETRAB SEC 175

- Varistor arrester with a low leakage current
- High-performance gas-filled surge arrester for N/PE protection
- Extremely narrow design, just 12 mm per position
- Pluggable
- High continuous voltage of 175 V AC for 120/208 V AC networks with high voltage fluctuations
- Low voltage protection level of 0.85 kV for the L-N mode of protection and 0.95 kV for the N-PE mode of protection
- Optical, mechanical status indicator
- Plugs can be tested with CHECKMASTER 2

Notes:

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

Surge protection and interference suppression filters

Surge protection for the power supply

Type 2 surge protective device

VALVETRAB MS

- Surge protection for individual assembly
- Optical, mechanical status indicator of the plug
- Disconnect device in the plug
- Base element coding the first time a plug is inserted
- Plugs can be tested with CHECKMASTER 2

Notes:

Choose the plug based on technical data.
Choose the base element corresponding to the required circuit and remote signaling function:

- TN-C: X+0 - circuit
- TN-S, TT; X+1 - circuit
- IT: Y+0 - circuit
- X = Number of phases
- Y = Number of phases + if required, neutral conductor

The number of plugs required corresponds to the number before the "+" in the circuit data, e.g., 3 plugs in a 3+1 circuit

When using a "+1" circuit, the F-MS 12 plug must be used between N and PE. See page 71

Surge protection and interference suppression filters

Surge protection for the power supply

Type 2 surge protective device

VALVETRAB MS

- Surge protection for individual assembly
- Optical, mechanical status indicator of the plug
- Disconnect device in the plug
- Base element coding the first time a plug is inserted
- Plugs can be tested with CHECKMASTER 2

Notes:

Choose the plug based on technical data.
Choose the base element corresponding to the required circuit and remote signaling function:

- TN-C: X+0 - circuit
- TN-S, TT; X+1 - circuit
- IEC: Y+0 - circuit
- X = Number of phases
- Y = Number of phases + if required, neutral conductor

The number of plugs required corresponds to the number before the "+" in the circuit data, e.g., 3 plugs in a 3+1 circuit
When using a "1+1" circuit, the F-MS 12 plug must be used between N and PE. See page 71

For IT systems with a voltage of 230 V phase-phase

For 240/415 V TN and TT systems with higher voltage fluctuations

Surge protection and interference suppression filters

Surge protection for the power supply

Type 2 surge protective device

VALVETRAB MB

- Double terminal block for safe and easy equipotential bonding connection
- Screw shafts with raised domes to ensure safe working
- Main connections with extended insertion funnels for increased resistance to creepage
- Optical, mechanical status indication for the individual arresters
- Visual display for checking the status directly on the device
- Pluggable signal connection for remote status signaling
- Compact design for space-saving installation

One-piece surge protection
for PV applications up to 1500 V DC

The product is also suitable for applications in PV systems with a max. short-circuit current $I_{SCPV} = 15$ kA (in accordance with EN 50539-11:2013).

Type 2 surge protective device VALVETRAB MS

- Type 2 surge protective device with consistent pluggable design
- For insulated and single-sided grounded PV applications
- Reliable contact, thanks to integrated rotating latch
- Optical, mechanical status indication for the individual arresters
- With or without floating remote indication contact
- Mechanical coding of all slots
- Plugs can be tested with CHECKMASTER 2

Surge protection and interference suppression filters

Surge protection for the power supply

Type 2 surge protective device

VALVETRAB combi MCB

- Combinations of type 2 surge protective devices with integrated arrester backup fuse
- Overload of the surge protection results in all-position disconnection from the mains
- Signaling to monitoring systems via remote indication contact in the event of an error
- Surge-proof arrester backup fuse tailored to type 2 surge protective devices
- Type 2 surge protective device with consistent pluggable design
- Disconnect device on each individual plug
- Optical, mechanical status indication for all protective plugs

Type 2 surge protective device VALVETRAB combi MCB

- Combinations of type 2 surge protective devices with integrated arrester backup fuse
- For 60 mm system technology
- Tool-free mounting on 5 and 10 mm thick busbars
- Signaling to monitoring systems via remote indication contact in the event of an error
- Surge-proof arrester backup fuse tailored to type 2 surge protective devices
- Type 2 surge protective device with consistent pluggable design
- Disconnect device on each individual plug
- Optical, mechanical status indication for all protective plugs
- Plugs can be tested with CHECKMASTER 2

Surge protection and interference suppression filters

Surge protection for the power supply

Type 2 surge protective device for PCB mounting

- Powerful type 2 surge protection
- Can be soldered directly onto the printed-circuit board
- Very small footprint
- Low height matching standard PCB components
- Available with remote indication contact or visual status indicator as an option
- Safe mechanical disconnection in the event of an overload

Notes:

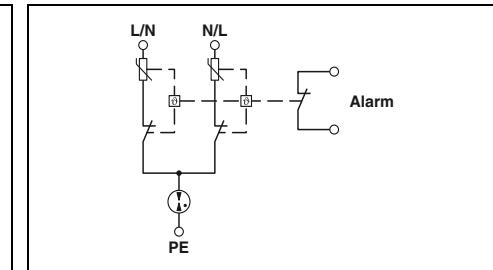

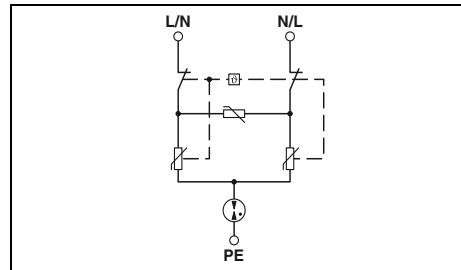

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

Type 3 device protection TERMITRAB complete

- Diode-based type 3 surge protection
- Overall width of just 6.2 mm
- Same shape as PTCB electrical device circuit breakers
- With Push-in or screw connection technology
- Pluggable
- Integrated mechanical status indicator
- Plugs can be tested with CHECKMASTER 2

Type 3 device protection BLOCKTRAB

BT-1S-230AC/... serves as device protection in deep installation boxes (in acc. with DIN 49073), cable ducts, underfloor systems, and end devices.

- With double spring-cage terminal blocks for tool-free conductor connection
- Side latches for easy fixing
- Optical or acoustic signaling of disconnection

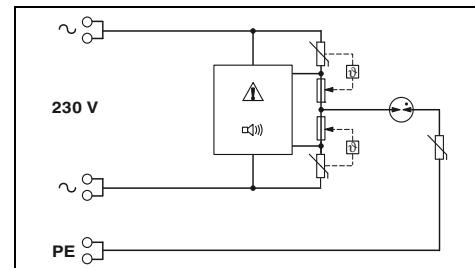

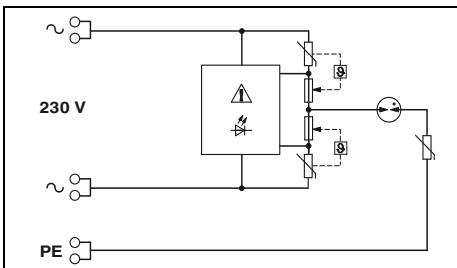

For universal mounting,
optical signaling

For universal mounting,
acoustic signaling

Notes:

If only one value is specified under mode of protection in the technical data, this value is valid for all modes of protection specified.

Surge protection for the power supply

Surge protection for NEMA systems

VALVETRAB US – 3-phase wye

- Surge protection in accordance with UL Listed type 1
- Just one connection terminal block for GND
- Consistent pluggable design
- Disconnect device on each individual plug
- Optical, mechanical status indication for the individual arresters
- With floating remote indication contact
- Mechanical coding of all slots
- Plugs can be tested with CHECKMASTER 2

Surge protection in thin layers – TERMITRAB complete

Starting from an overall width of 3.5 mm, the TERMITRAB complete product range is a tailored product range for almost all applications in measurement and control technology. Depending on the type of signal to be protected, with TERMITRAB complete you will find an ideally suited circuit version in the portfolio.

Signaling and disconnection

The mechanical status indicator functions without additional auxiliary energy and displays the disconnection of a protective element in the event of an overload. This means you are constantly informed of the status and can replace the overloaded protective device.

Remote signaling

Thanks to the remote signaling modules that are available as an option, you can decide whether and when you require this feature. To monitor retrospectively, you can easily align remote signaling modules to protective devices that are already installed. If a protective element is disconnected in the event of an overload, the disconnect device closes the monitoring channel and group remote signaling is triggered. The overloaded device is detected on site by the status indicator – and that is purely mechanically, without auxiliary energy.

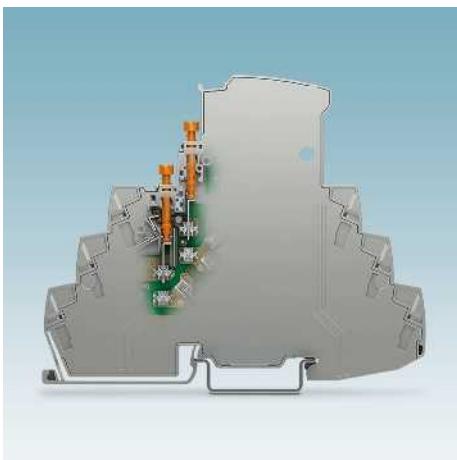

Universal use

The areas of application for TERMITRAB complete are so diverse that they can be used in any industry. Thanks to the narrow overall width, starting from 3.5 mm, the product range is ideal for process technology, as very often a high packing density is required in the distribution cabinets. They protect up to 572 signals on one meter, which means that your systems can be made smaller. The various approvals permit use in onshore and offshore systems, e.g., for petrochemicals or wind power. The tailored TERMITRAB complete portfolio offers you the widest range of features, and therefore an optimum product selection for your applications. This means you can reliably protect your signals against surge voltages – from the field to the controller.

Quick wiring

TERMITRAB complete is available with conventional screw connection and innovative Push-in connection technology. It guarantees quick and easy installation in the control cabinet. At the same time, the Push-in connection technology enables mechanical wiring of the surge protective devices, within the scope of tomorrow's intelligent automation solutions.

i Your web code: #0292

The narrowest surge protection

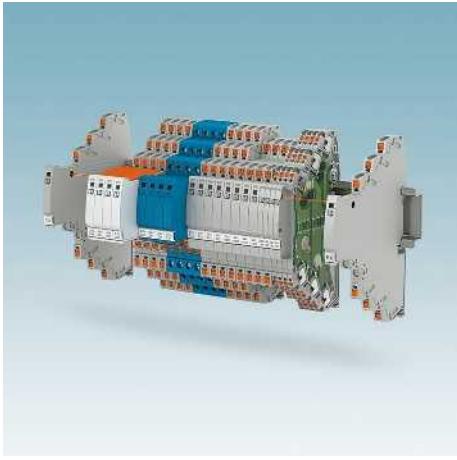

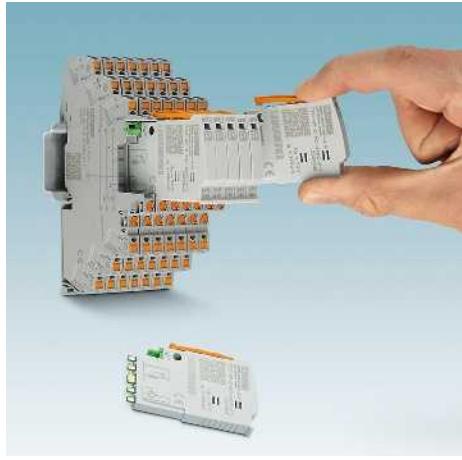

Starting from an overall width of 3.5 mm, TERMITRAB complete is the world's first surge protection solution for measurement and control technology.

Innovative knife disconnection

The integrated knife disconnection enables the signal path to be broken up, e.g., to carry out isolation measurements. An open signal path is easy to detect from the projecting function screws. The screws are equipped with overwind protection.

Optional visual remote signaling

Up to 40 protective devices are visually monitored with the optional remote signaling modules. Add further protective devices easily to the monitoring system without additional wiring effort.

Plug in, remove, and test

For repeated tests, remove the plugs of multi-piece protective devices without impedance. The signals are not interrupted and the controllers do not immediately detect an impedance change in the measuring circuit. Testing and documentation takes place in the CHECKMASTER 2. If a replacement is required, the affected plug is simply replaced without accessing the installation.

Tailored portfolio

The portfolio ranges from single-stage, one-piece protective devices to multi-stage pluggable versions. A range of voltage and circuit versions that are optimized for different applications and various connection technologies complete the product range.

Versatile

Certain applications require special tests and approvals. TERMITRAB complete meets the requirements of Underwriters Laboratories (UL). Furthermore, versions with ATEX, IEC Ex, and GL approvals are available.

Intelligent and systematic surge protection – PLUGTRAB PT-IQ

The PLUGTRAB PT-IQ product range is the first to offer predictive function monitoring for surge protective devices in the context of measurement and control technology. Boasting a whole range of additional features, the new surge protection system is a real highlight from Phoenix Contact.

Always know what is happening – Predictive monitoring

The individual components of the protective devices are permanently monitored. When the performance limit has been reached as a result of frequent surge voltages, this is indicated by the yellow status symbol. The arrester continues to function and your system is still protected. However, replacement of the protective plug is recommended. This ensures you are informed even earlier and can replace your surge protection before the protective plug is overloaded (red signal). Furthermore, if you use the remote signaling option, you can check how well your system is being protected from anywhere and at any time.

Permanent and error-free installation

The PLUGTRAB PT-IQ minimizes the amount of wiring required. This is made possible by the DIN rail connector (TBUS), which is easily clipped onto the DIN rail. A controller handles the distribution of the power supply and implements remote signaling of all connected surge protective devices via the TBUS. All you have to do then is install the surge protective devices on the TBUS – and you're done! The plug and base element are coded to avoid installation errors during replacement.

Limitless extension

The controller monitors all arresters which are connected to the controller via the TBUS. You can bridge the TBUS across DIN rails to monitor even more protective devices. After 28 protective devices, an additional controller must be installed to supply voltage. Remote signaling can be performed from any controller in the system.

Other surge protective devices

PLUGTRAB PT are pluggable protective devices without remote signaling, also with circuit versions for intrinsically safe signal circuits.

The multi-level terminal blocks in the TERMITRAB or LINETRAB product ranges have an overall width of just 6.2 mm yet are able to offer protection for up to four signal wires.

As they are installed directly on measuring sensors, the SURGETRAB screw connection modules are able to provide reliable protection against transients even in EX i and Ex d applications.

The products in the COMTRAB modular range have been designed specifically for use in marshaling distributors.

i Your web code: #0144

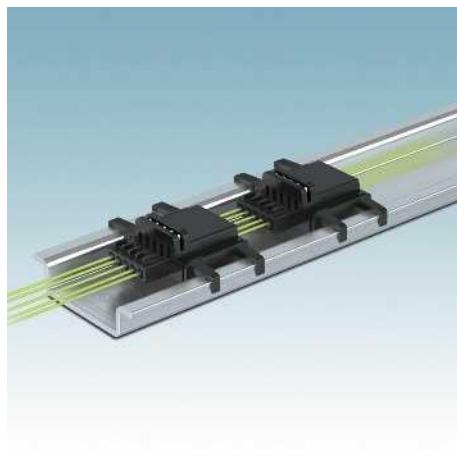

Group message

- Green: protective device OK
- Yellow: performance limit reached, replacement recommended
- Red: protective device overloaded, replace

Multi-stage remote signaling

Connect the remote signaling to the controller that acts as a supply and remote module (one-off connection operation). The status is output according to the priority as red, yellow or green. This ensures you always know what is happening and can always keep an eye on your system's protection.

TBUS DIN rail connector

The DIN rail connector (TBUS) supplies voltage to the protection modules and forwards the status of each individual arrester to the controller. You benefit from the reduced wiring costs and can implement surge protection quickly without errors.

For Ex zone 2

With the PHOENIX CONTACT PLUGTRAB PT-IQ Ex protective devices, it is possible for the first time to install protective devices with multi-stage monitoring and remote signaling directly in Ex zone 2. The intrinsically safe protective circuits can be led up to Ex zone 0.

Special systems

Implement protection in the field directly at the measuring sensor with SURGETRAB screw connection modules.

Easy selection

With just a few clicks, our MCR configurator helps you find the ideal protection for your application. Refine the product selection further by defining additional properties. If the quick search function does not find a solution for your application, use the advanced search to find more products. You can access the MCR configurator using the web code:

Surge protection and interference filters

Surge protection for measurement and control technology

Isolated signal circuits

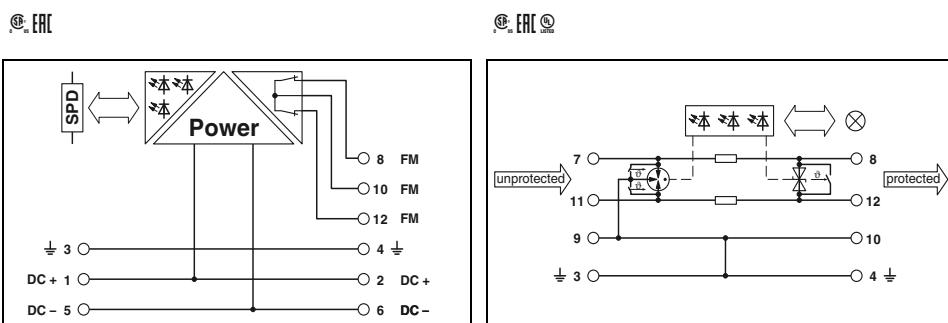

PLUGTRAB PT-IQ

- Multi-stage status monitoring
- Group message via supply and remote signaling module
- Multi-stage, floating remote signaling
- System supplied via DIN rail bus
- Up to 28 protection modules per supply module
- Maximum ease of maintenance, thanks to the two-piece design
- Plugs are coded
- Impedance-neutral disconnection of plug for maintenance purposes
- PT-IQ... base element with Push-in or screw connection technology
- Base element remains an integral part of the installation
- Corresponding replacement plugs can be found on our website

Surge protection and interference filters

Surge protection for measurement and control technology

Isolated signal circuits

PLUGTRAB PT

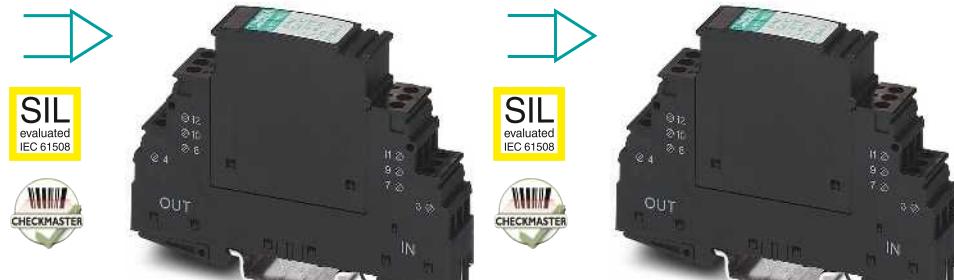

- Consistently pluggable signal circuit protection
- Maximum ease of maintenance, thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of plug for test and maintenance purposes
- Plugs can be tested with CHECKMASTER 2

Note:

Base elements are grounded differently.

For **PT .x.-BE**, connections 9/10 (GND) are connected directly to the mounting foot.

For **PT .x.+F-BE**, connections 9/10 (GND) are connected to the mounting foot via a gas-filled surge arrester.

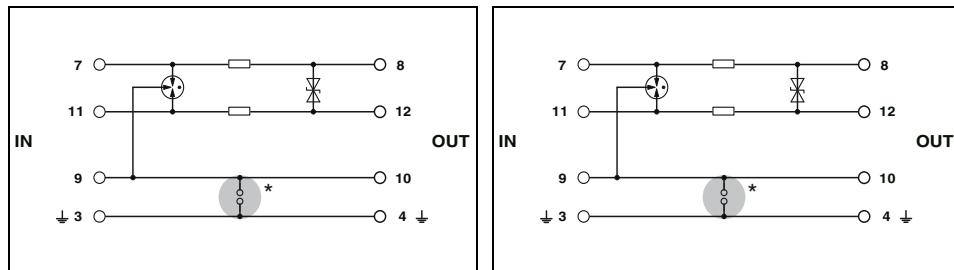

Double wire (loop), floating,
e.g., for 4 ... 20 mA current loops

Double wire (loop), floating,

Surge protection for measurement and control technology

Signals with common reference potential

PLUGTRAB PT-IQ

- Multi-stage status monitoring
- Group message via supply and remote signaling module
- Multi-stage, floating remote signaling
- System supplied via DIN rail bus
- Up to 28 protection modules per supply module
- Maximum ease of maintenance, thanks to the two-piece design
- Plugs are coded
- Impedance-neutral disconnection of plug for maintenance purposes
- PT-IQ... base element with Push-in or screw connection technology
- Base element remains an integral part of the installation
- Corresponding replacement plugs can be found on our website

Supply and remote signaling module

Surge protection and interference filters

Surge protection for measurement and control technology

Signals with common reference potential

PLUGTRAB PT

- Consistently pluggable signal circuit protection
- Maximum ease of maintenance, thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of plug for test and maintenance purposes
- Plugs can be tested with CHECKMASTER 2

Note:

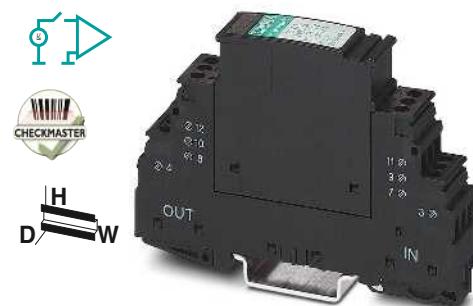

Base elements are grounded differently.

For **PT .x.-BE**, connections 9/10 (GND) are connected directly to the mounting foot.

For **PT .x.+F-BE**, connections 9/10 (GND) are connected to the mounting foot via a gas-filled surge arrester.

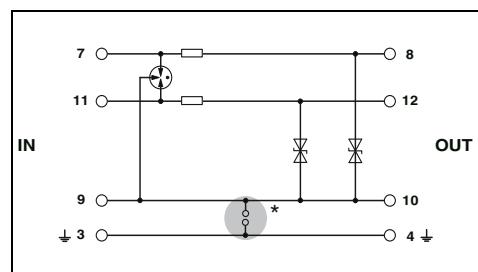

Notes:

For approvals and dimensional drawing, visit phoenixcontact.net/products

Surge protection and interference filters

Surge protection for measurement and control technology

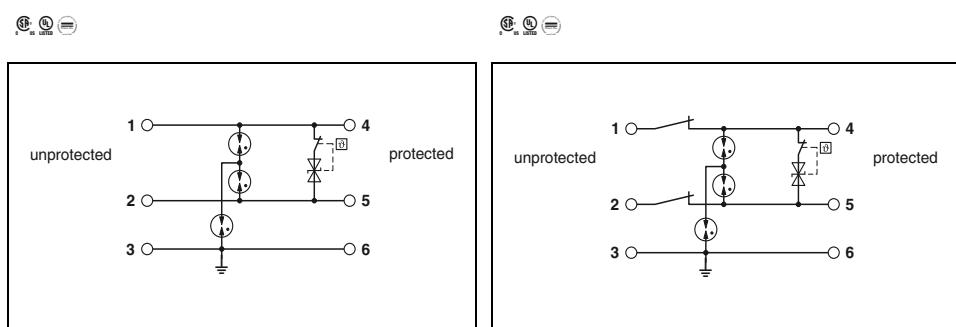

Isolated signal circuits TERMITRAB complete

- For use with high rated current
- One-piece or pluggable surge protection
- Overall width of just 6.2 mm
- With Push-in or screw connection technology
- Integrated mechanical status indicator
- Impedance-neutral insertion and removal
- Coded plug versions
- With knife disconnection as an option
- Optional remote signaling module monitors up to 40 items, without additional wiring
- Plugs can be tested with CHECKMASTER 2

2-conductor, floating, pluggable,
e.g., for actuator circuits

Surge protection and interference filters

Surge protection for measurement and control technology

Resistance-dependent measurements

PLUGTRAB PT

- Consistently pluggable signal circuit protection
- Maximum ease of maintenance, thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of plug for test and maintenance purposes
- Plugs can be tested with CHECKMASTER 2

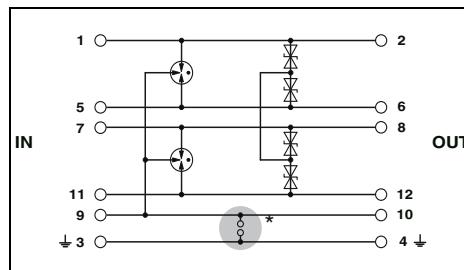

Note:

Base elements are grounded differently.
For **PT .x.-BE**, connections 9/10 (GND) are connected directly to the mounting foot.
For **PT .x.+F-BE**, connections 9/10 (GND) are connected to the mounting foot via a gas-filled surge arrester.

4-conductor, floating, impedance-free,
e.g., for temperature measurement

Surge protection and interference filters

Surge protection for measurement and control technology

Potentially explosive applications

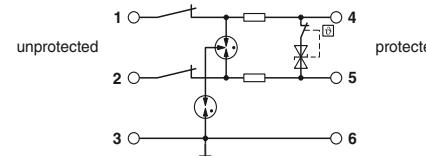

TERMITRAB complete

- One-piece or pluggable surge protection
- Tailored to the special requirements of intrinsically safe circuits
- Overall width of just 6.2 mm
- With screw connection technology
- Integrated mechanical status indicator
- With knife disconnection
- Impedance-neutral insertion and removal
- Coded plug versions
- Plugs can be tested with CHECKMASTER 2

Double wire (loop), floating, intrinsically safe, one-piece, e.g., for 4 ... 20 mA current loop

Potentially explosive applications **PLUGTRAB PT-IQ**

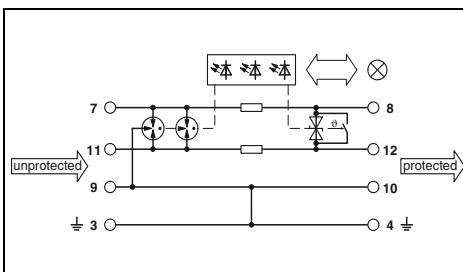

- Tailored to the special requirements of intrinsically safe circuits
 - Multi-stage status monitoring
 - Group message via supply and remote signaling module
 - Multi-stage, floating remote signaling
 - System supplied via DIN rail bus
 - Up to 10 protection modules per supply module
 - Maximum ease of maintenance, thanks to the two-piece design
 - Plugs are coded
 - Impedance-neutral disconnection of plug for maintenance purposes
 - Base element remains an integral part of the installation
 - Corresponding replacement plugs can be found on our website

Surge protection and interference filters

Surge protection for information technology and telecommunications

Low signal levels at high frequencies require special protective circuits in data processing and telecommunications. The arresters must guarantee short response times to quickly limit the surge voltages to safe values, without impairing signal quality. In addition, the protective devices support system-specific connections, such as RJ45 or D-SUB connectors, and all types of network topology.

DATATRAB DT – The all-round solution for protecting data interfaces

DATATRAB DT reliably protects high-speed networks against damage caused by surge voltages. DT-LAN-CAT.6+ supports various data protocols at very high transmission speeds, such as Ethernet, Power over Ethernet (PoE), ISDN, token ring, and DS1, in a single device.

The housing has a ground connection snap-on foot into which the ground connection cover with equipotential bonding cable is inserted. DATATRAB can be therefore used either as an adapter or a DIN rail module after removing the ground connection cover.

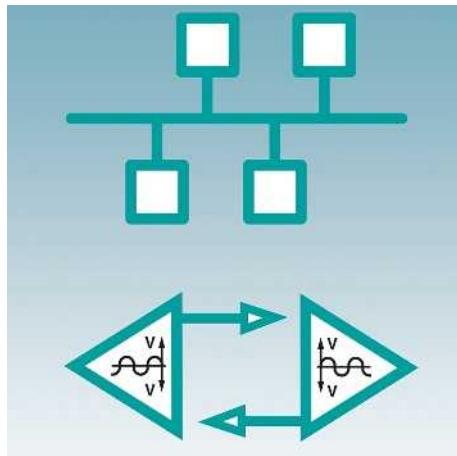

[i] Your web code: #0145

**Versatile**

The DATATRAB product range can offer a suitable protective device for many and varied applications. The protective devices are simply installed between the signal paths with interfaces for RJ11/12, RJ45, D-SUB, or screw connection.

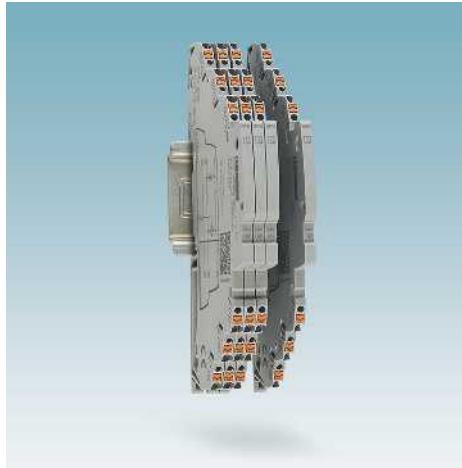

**Speed**

Used in EDP systems with a transmission speed of up to 10 Gbps (CAT6/CLASS E_a) and in telecommunications networks with 50 Mbps (VDSL).

**Use**

Protective devices suitable for all common applications including Ethernet, token ring, ISDN, DS1, DSL, analog telecommunications, RS-485, V.24, V.11, etc. are available.

The circuit breakers also support Power over Ethernet (PoE+) in Mode A and B versions.

**The narrowest surge protection**

Starting from a width of 3.5 mm, TERMITRAB complete is the world's narrowest surge protection solution for MCR and fieldbus applications.

**COMTRAB modular**

For protecting telecommunications systems

- Direct insertion in LSA-PLUS marshaling panels
- Coarse protection magazines with gas-filled surge arrester
- Modular miniature connectors with combined coarse and fine protection elements for optimum protection

**Other designs**

Other application-specific protective devices include:

- Two-piece pluggable protective devices in the PLUGTRAB product range
- Combined adapters for the power supply and MAINTRAB interfaces

Surge protection and interference filters

Surge protection for information technology and telecommunications

Ethernet/PROFINET networks with twisted pair cabling

DT-LAN-CAT.6+

- Suitable for category 6 high-speed data networks
- Secure data transmission up to 10 Gbps
- Protective adapter for eight signal paths via RJ45 connector
- Can be installed in a control cabinet by removing a ground connection adapter

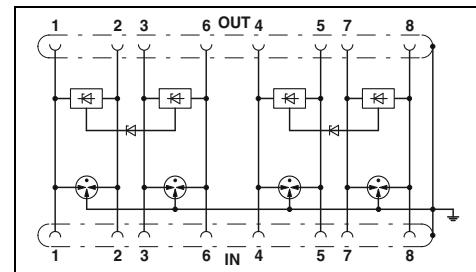

For LAN interfaces (Class E_A/CAT 6) including PoE+ and ISDN S₀ protection

D-LAN-CAT.5-FP

- Suitable for category 5 data networks
- Secure data transmission up to 1 Gbps
- Protective adapter for eight signal paths via RJ45 connector

D-LAN-19"

- 19" rack for installation in storey distributors
- Up to 24 ports with RJ45 connection
- Secure data transmission up to 1 Gbps
- Protection of all eight signal wires of the data cable
- Indirect grounding via a gas-filled surge arrester in the housing
- Direct grounding via a connection on the housing

Surge protection and interference filters

Surge protection for information technology and telecommunications

RS-485 interfaces

Notes:
Attenuation characteristics at phoenixcontact.net/products

PLUGTRAB PT-IQ 5-HF

- Connection: Push-in or screw connection technology
- For high transmission speeds
- High discharge capacity
- Multi-stage, floating remote signaling
- Group message via supply and remote signaling module

Pin assignment PT-IQ-5-HF-12DC

- 1,5 Data line pair 1T(A)/T(B)
- 7,11 Data line pair 2 R(A)/R(B)
- 9 Signal ground (Ground)
- 3 $\frac{1}{2}$

5-conductor with common reference potential,
9/10 connection grounded directly

PLUGTRAB PT 5-HF

- High transmission speed
- Fast response time
- High discharge capacity
- Plugs can be tested with CHECKMASTER 2

Pin assignment PT 5-HF...:

- 1,5 Data line pair 1T(A)/T(B)
- 7,11 Data line pair 2 R(A)/R(B)
- 9 Signal ground (Ground)
- 3 $\frac{1}{2}$

Note:

Base elements are grounded differently.
For **PT .x.-BE**, connections 9/10 (GND) are connected directly to the mounting foot.

For **PT .x.+F-BE**, connections 9/10 (GND) are connected to the mounting foot via a gas-filled surge arrester.

DATATRAB DT-UFB-485

- Adapter type
- 9-pos. D-SUB connection
- DIN rail mounting possible by removing the cap

Pin assignment DT-UFB-485:

- 3,8 Data line pair 1 T(A)/T(B)
- 4,9 Data line pair 2 R(A)/R(B)
- 2,7 Signal ground (Ground)
- $\frac{1}{2}$

PROFIBUS DP fieldbus system

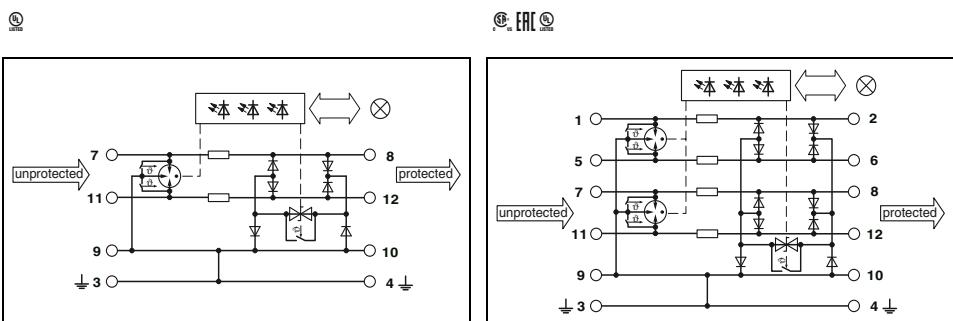

PLUGTRAB PT-IQ

- Multi-stage status monitoring
- Group message via supply and remote signaling module
- Multi-stage, floating remote signaling
- System supplied via DIN rail bus
- Up to 28 protection modules per supply module
- Maximum ease of maintenance, thanks to the two-piece design
- Plugs are coded
- Impedance-neutral disconnection of plug for maintenance purposes
- PT-IQ...-UT base element with screw connection technology
- PT-IQ...-PT base element with Push-in connection technology
- Base element remains an integral part of the installation
- Corresponding replacement plugs can be found on our website

TERMITRAB complete

- One-piece or pluggable surge protection
- Tailored to the special requirements of intrinsically safe circuits
- Overall width of just 6.2 mm
- Integrated mechanical status indicator
- Impedance-neutral insertion and removal
- Coded plug versions
- With knife disconnection
- Plugs can be tested with CHECKMASTER 2

3-conductor with common reference potential,
intrinsically safe, one-piece

PLUGTRAB PT-IQ 5-HF

- Surge protection system
- Group message via supply and remote signaling module
- Multi-stage, floating remote signaling
- System supplied via DIN rail bus
- Base element with screw connection technology

PLUGTRAB PT 5-HF

- High transmission speed
- Fast response time
- High discharge capacity
- Plugs can be tested with CHECKMASTER 2

DATATRAB DT-UFB-IB-RBI/-RBO

- Adapter type
- 9-pos. D-SUB connection
- For remote bus modules
- DIN rail mounting possible by removing the cap
- D-SUB cable included

Note:

PT .x.+F-BE: connections 9/10 (GND) are connected to the mounting foot via a gas-filled surge arrester.

Surge protection and interference filters

Surge protection for information technology and telecommunications

MCR-PLUGTRAB, for various applications

Notes:

Attenuation characteristics at phoenixcontact.net/products

- Protection for fieldbus systems and signal circuits with three- to five-conductor technology
- Cable shield connection using SSA... shield fast connection
- Maximum ease of maintenance, thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of plug for test and maintenance purposes

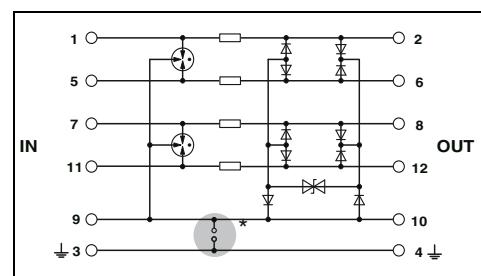

5-conductor protection
for fieldbus and serial interface

Note:

Base elements are grounded differently.
For **PT .x.-BE**, connections 9/10 (GND) are connected directly to the mounting foot.

For **PT .x.+F-BE**, connections 9/10 (GND) are connected to the mounting foot via a gas-filled surge arrester.

Surge protection and interference filters

Surge protection for information technology and telecommunications

DSL telecommunications

DATATRAB DT

- Protection for two DSL ports
- Connection: RJ45 (RJ12/RJ11) and plug-in screw terminal block (COMBICON)
- Alternatively, can be snapped onto a DIN rail
- Protective circuit:
 - Coarse/fine protection combination between all cables of signal wire pairs, as well as common mode voltage coarse protection between all signal wires and ground
- Separate ground connection line
- The adapter included enables conversion from RJ45 to RJ11 and RJ12 (for contacting, see circuit diagram)

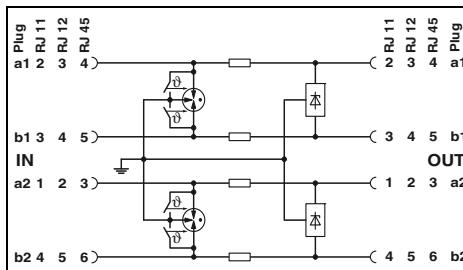

Attachment plug
for two VDSL interfaces (ports)

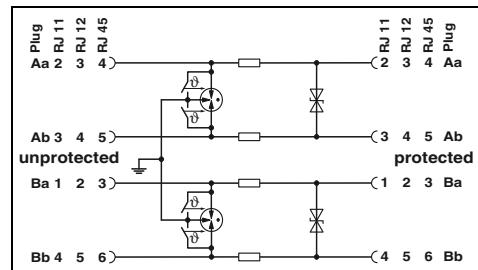

Attachment plug
for two SHDSL interfaces (ports)

You won't lose reception with COAXTRAB

Transceiver systems are generally considered to be particularly susceptible to surge voltages. Antenna cables which extend beyond a building and are usually very long, plus the antennas themselves, are directly exposed to atmospherical discharge.

Cables with a coaxial structure and therefore favorable EMC properties are primarily used in antenna systems. However, the risk of surge voltage coupling in antenna cables and potential transfer through to the sensitive interfaces of transceiver systems is not eliminated.

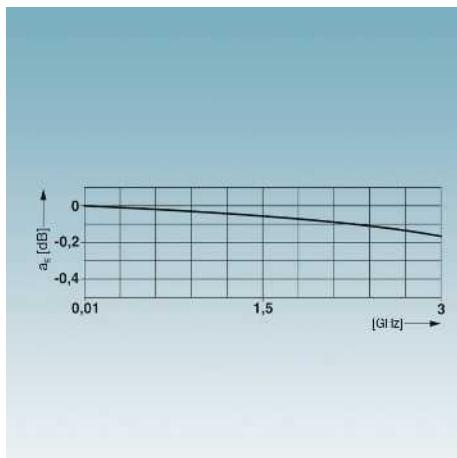

Thanks to interface-optimized surge protective devices, the COAXTRAB product range significantly increases safety for transceiver equipment. The aim of such safety measures is to increase the availability and operability of the devices affected.

i Your web code: #0146

Shielding

Good shielding properties are vital for a clean transmission. The robust metal housings provide ideal shielding properties and are also suitable for use in harsh industrial environments.

Customized products

Appropriate protective devices are available for all applications including SAT receiver systems, mobile phones, and video monitoring.

The very low attenuation values ensure that data transmission is clean.

Performance classes

The protective devices conform to standards in all performance classes. This applies for coarse protection in accordance with Category D1, 10/350 µs and for fine protection in accordance with Category C2 and C1, 8/20 µs.

Connection technology

The right connection technology to suit the application: F connector, TV connector, type N, 7/16, BNC, SMA.

Surge protection and interference filters

Surge protection for transceiver systems

Selection guide

The interface matrix indicates the suitable surge protective device for a specific interface.

¹⁾ The PT-IQ-PTB-UT supply module is required in order to operate the PT-IQ series.

Explanation of the IEC categories

LPZ zone	Test category for SPD in acc. with IEC 61643-21	Test class for SPD in acc. with IEC 61643-11
0/1	D1	I
1/2	C2	II
2/3	C1	III

Interface-based product selection for surge protection

The STOP-IT (Selection of Protection for Information Technology) selection guide provides support in choosing your surge protection solution for a variety of additional interfaces in information and MCR technology.

i Your web code: #2079

Interference suppression filters

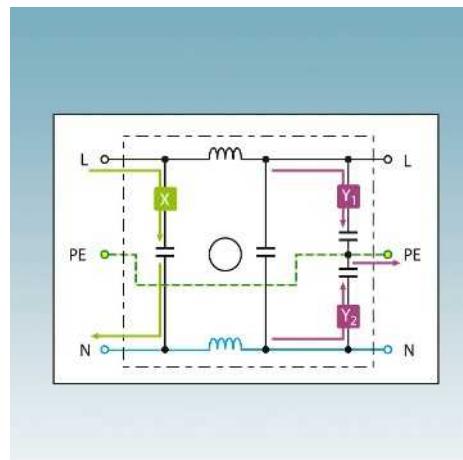

Reliable signals by means of interference suppression filters with integrated surge protection

High-frequency interference can also be caused by power electronics equipment. Switching operations triggered mechanically or electronically generate pulse-like and high-frequency interference voltages. These voltages spread unimpeded across the cable network. All the devices within this cable network are affected. Data errors, uncontrolled functions, and system crashes can result, with data processing devices at particular risk.

Interference voltage filters for power supply units

Interference suppression filters limit conducted high-frequency interference voltages. Devices used in data processing or automation particularly benefit from a clean power supply. The end result is safe operation and reliable measured results. Thanks to the integrated surge protection, surge pulses are effectively limited and surge currents are safely discharged.

i Your web code: #0149

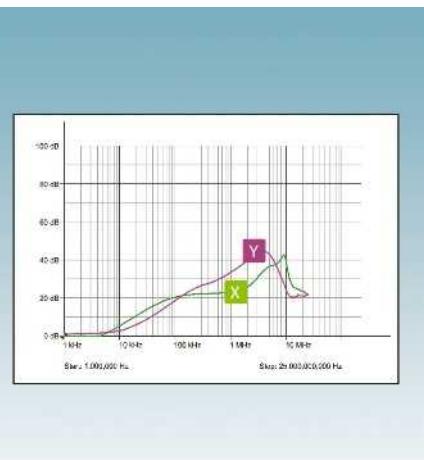

Mains interference filters – Operating principle and range

Filtering of symmetrical disturbance variables

X - Interference voltages between the phase and neutral conductor are filtered.

Filtering of asymmetrical disturbance variables

Y₁,Y₂ - The opposite grounded interference voltages from phase to PE and from the neutral conductor to PE are filtered.

Operating range of filters

An attenuation curve diagram illustrates the effective operating range of mains interference filters. The relevant frequency-dependent attenuation can be read according to the symmetrical or asymmetrical filter circuit.

Interference suppression filters with surge protection

Interference suppression filters with integrated surge protection have two tasks: they absorb transient overvoltages and also limit high-frequency interference voltages and interference currents.

Versions are available for the power supply and for signal circuits.

ImpulseCheck

Clear insight into the system

ImpulseCheck is the world's first intelligent assistance system for surge protection in the field of mains protection. The module allows you to measure the state of health of every single protective device via cloud connection and provides new digital services.

Optimum protection for sensitive systems

In many cases, SPDs can limit surge voltages and discharge surge currents without your system sustaining any damage. Depending on the number, duration, and amplitude of the surge currents, SPDs may be pushed to their very limits and fail. Other faults in the electrical installation, such as short circuits or ground faults, can also contribute to the failure of SPDs. A failure is indicated by a status indicator on the SPD itself and additional remote signaling, if necessary.

The current, actual load on the SPDs can only be determined by performing an electrical test on the individual modules. However, this is laborious and only provides an insight into the state of the SPDs at the time of testing.

How does ImpulseCheck work?

ImpulseCheck enables the continuous monitoring of SPDs. Thanks to external sensor cables, the system can be easily installed or retrofitted in both new and existing systems. It takes just a few simple steps to attach up to 4 sensors to the connecting cables of the monitored SPD.

Surge currents with a very high time resolution are captured on each channel. Both high-frequency events and sustained currents are measured reliably. Electromagnetic interference is detected, allocated a time stamp, and transmitted to PROFICLOUD. Important parameters are evaluated and indicated from the signal curves for surge current events. In addition, the remote indication contact of the monitored SPD can be evaluated.

For Phoenix Contact SPDs, the actual load is determined at all times based on the recorded events. The determined status (green, yellow, red) is displayed in PROFICLOUD as well as on the device itself. This allows you to respond proactively before an SPD actually fails.

Benefit from digital added value

The cloud-based evaluation of measured data enables the direct use of new digital services. Status messages regarding surge protection can be displayed on any web-enabled device. For example, you can configure custom notifications for various events in PROFICLOUD or create standard-compliant status reports at the push of a button.

Thanks to the ongoing further development of new and existing devices for PROFICLOUD as well as the platform itself, it will be possible to network a wide range of applications and services in the future.

Intelligent assistance system for surge protection

Notes:

ImpulseCheck is supplied without sensors. They must be ordered separately.

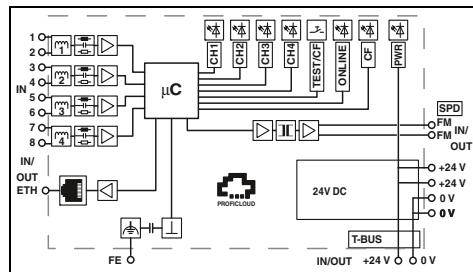

new

ImpulseCheck IPCH

- Determination and display of remaining service life (state of health) for each monitored mode of protection in PROFICLOUD
- Multi-stage state of health signaling for each monitored mode of protection directly on the device
- Real-time measurement of surge currents and detection of electromagnetic interference in order to diagnose problems in the system
- Automatic calculation of amplitude, charge, and specific energy
- Measurement of multiple pulses and sustained currents
- Display and retrieval of waveforms for individual recorded surge current events in PROFICLOUD
- Cloud-based notification on status change of the monitored modes of protection
- Additional interface for integrating the SPD remote indication contact
- Configuration of network connection via local web server
- Power supply via screw connection or DIN rail connector
- Easy installation, even when retrofitting, thanks to separate sensor cable
- Connection of up to 4 sensor cables, depending on the SPD circuit version

Evaluation and communication unit,

Lightning current measurement

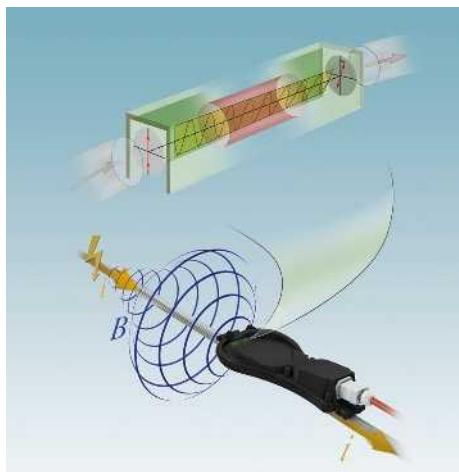

Lightning strikes cause devastating damage to buildings and systems. It is practically impossible for employees to continuously monitor exposed or large-scale systems, which means that damage is detected too late.

Detecting lightning with the lightning monitoring system

The LM-S lightning monitoring system supports continuous monitoring. Lightning events are detected, evaluated, and remotely monitored via network access. By consolidating the system operating parameters and the measuring data, the system provides a better basis for making decisions regarding control and maintenance.

The LM-S lightning current monitoring system consists of the following components:

- Sensor
- Connecting cable
- O/E module
- Evaluation unit

Faraday effect as a reliable measuring method

The internal measuring principle of the LM-S is based on the Faraday effect. Polarized light in a specific medium is rotated through a magnetic field over a defined length and measured.

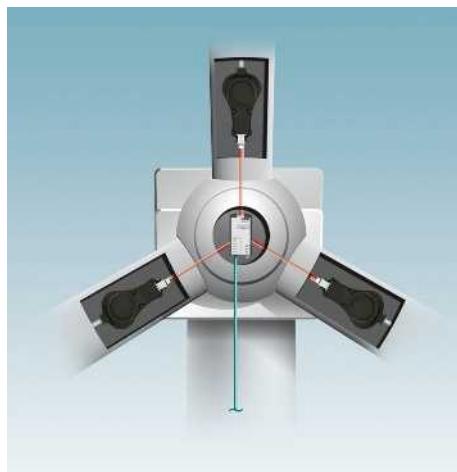

The higher the amperage (i) generated by a lightning strike the greater the magnetic flux density (B) and, therefore, the rotation of the polarized light.

The lightning monitoring system detects this change in the light signal and uses this as the basis for the corresponding measured value results.

Remote monitoring in real time

The evaluation unit can be easily integrated into standard network systems via the RJ45 Ethernet interface. The data acquired can be accessed and the system can be configured via web interface, Modbus/TCP or OPC UA. The web interface is opened via the Internet browser on a PC connected to the system using IP addressing.

Detection and evaluation

The sensors are mounted on the lightning arrester cables. They record the magnetic field that occurs around the conductor due to the lightning surge current. The measured result is transmitted via fiber optics to the O/E module of the evaluation unit, where the optical signal is converted into an electrical signal. Based on the values obtained, the evaluation unit determines the lightning characteristics with their typical parameters, including, for example, the maximum lightning current strength, lightning current rate of rise, charge, and energy. These results can be forwarded to an available management system via the Ethernet interface.

Test devices

CHECKMASTER 2 – The intelligent test device for surge protective devices

Outdoor and indoor lightning protection must be regularly tested in accordance with normative requirements (IEC 62305) and official regulations. A basic visual check is not enough to identify damage to surge protective devices. Only an electrical check using the CHECKMASTER 2 produces meaningful results. The electrical check is performed with the aid of a programmable logic controller, a high-voltage source, and a constant current source. During the check, a program-controlled electrical test is performed on all the relevant components of the surge protective device. Thanks to the integrated database for surge protective devices, spark gaps, gas-filled surge arresters, varistors, and suppressor diodes can be checked automatically. Surge protective devices that were previously damaged, surge protective devices that are nearing the electrical tolerance limits, and faulty surge protective devices can be safely identified.

In industries where high demands are placed on system availability, the CHECKMASTER 2 enables predictive maintenance to be carried out on surge protective devices. This provides additional security for failure-critical systems.

i Your web code: #0147

Easy selection

The CHECKMASTER 2 has a modular design. Corresponding test adapters are available for the various surge protective devices. Further information about the test adapters required can be found on the next page.

Convenient scanning

The barcodes on the surge protective devices present a fast and error-free solution for entering items. Plant-specific ID codes or user-defined designations can be entered via the color touch display or read from individually created barcode labels.

Fast logging and easy data export

The tests are documented in accordance with IEC 62305. The CHECKMASTER 2 saves all test results to the internal memory with mains failure protection. The test reports are available via USB stick for convenient further processing in Office programs.

Test devices

CHECKMASTER 2

- Modular test device for pluggable surge protective devices from Phoenix Contact
- Easy and tool-free changing of test adapters
- Integrated programmable logic controller with high-voltage source and constant current source
- Automatic and program-controlled testing of surge protective devices
- Easy operation by means of color touch display with virtual keypad
- User interfaces: German, English
- Further languages available for download: French, Italian, Spanish, Portuguese, Turkish, Russian
- Barcode scanner for automatic identification of surge protective devices and for reading user-specific barcodes (e.g., plant identification codes)
- Plant identification codes can also be entered using the virtual keypad
- USB interface for connecting standard USB sticks
- Easy transfer of test reports to Office programs and easy system software update via USB stick
- No additional software required
- No data cable required
- Power supply cable with SCHUKO connector
- Robust plastic transport case; with removable lid
- Additional compartment for another test adapter
- Calibration certificate

Test adapters are not supplied as standard with the CHECKMASTER 2. The required test adapters must be ordered separately.

PA-CASE 2 transport case for test adapters

- Padded compartments for holding test adapters for the CHECKMASTER 2
- Test adapters are not supplied as standard with the PA-CASE 2

Free software for updating the CHECKMASTER 2 can be found in the download area on the Phoenix Contact homepage.

The CHECKMASTER 2 is designed for use in industrial environments (EMC: class A product) and may not meet the requirements for radiated disturbance variables for use in residential areas.

Nominal voltage U_N
Temperature range

Description

Test device, for testing the correct function of surge protective devices from Phoenix Contact; test adapters must be ordered separately

Transport case, to hold four test adapters

Test adapter, for testing the correct function of surge protective devices from Phoenix Contact:

FLASHTRAB SEC-HYBRID
FLASHTRAB FLT-CP/SEC and VALVETRAB VAL-CP/SEC

VALVETRAB VAL-MS
PLUGTRAB PLT-SEC...UT/PT (width: 17.5 mm)

PLUGTRAB PT/PLT (width: 17.5 mm)
PLUGTRAB PT/PLT (width: 35 mm)
PLUGTRAB UFBK/UAK
TERMITRAB complete
COMTRAB CTM

Test device

Transport case

Test adapter

Total width 432 mm

Technical data100 V AC ... 240 V AC
5°C ... 35°C

Surge protection and interference filters

Accessories for surge protection

Feed-through terminal block

- For wiring mixed combinations of lightning current and surge arresters
- As a system extension for FLASHTRAB and VALVETRAB applications
- Practical wiring of all common applications

Feed-through terminal block

Technical data	
Electrical data	
Maximum continuous operating voltage U_c	500 V AC
Nominal current I_N	-
Impulse discharge curr. I_{imp} (10/350) μ s	Peak value
	100 kA
General data	
Dimensions W/H/D	17.7 mm / 89.8 mm / 65.5 mm
Connection data rigid / flexible / AWG	0.5 ... 35 mm ² / 0.5 ... 25 mm ² / 20 ... 2
Temperature range	-40°C ... 85°C
Flammability rating in accordance with UL 94	V-0
Test standards	EN 60947-7-1 / IEC 61643-11 / EN 61643-11
Ordering data	
Description	Type
Feed-through terminal block with biconnect connecting terminal blocks as wiring aid for lightning current and surge arrester applications.	DK-BIC-35
	Order No. 2749880 Pcs./Pkt. 1

Equipotential bonding and TRABTECH housings

Equipotential bonding strip

- For main equipotential bonding in accordance with DIN VDE 0100
- Also for lightning protection equipotential bonding in accordance with DIN EN 62305 TRABTECH housing
- Use in harsh environmental conditions at the installation location
- Installation outdoors or indoors possible

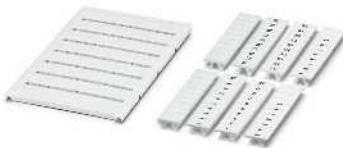

Equipotential bonding strip

Equipotential bonding strip	PAS-1	2765615	1

Marking material

- For clear and logical identification
- The multi-section ZB strips can be easily separated
- Can be marked with the MARKING system or by hand using B-STIFT

For terminal width 6.2 mm
